

The Reign Thanos Timepiece

(RN2101-RN2107)

Mechanical automatic watches harness the kinetic energy contained within the natural movement of your arm to generate the force required to operate. The watch will commence operation after a sufficient volume of initial power has been generated by handling / wearing or by manually winding the crown. Supplemental winding through wear or manual winding will ensure sustained functionality and increase the duration in which the watch will continue to operate when unworn.

To Set the Time:

- 1) Pull the crown on the right side of the case out one click.
- 2) Rotate the crown to set the hands to the current time.
- 3) Push the crown in one click to commence timekeeping.
- 4) Manually wind the mainspring by rotating the crown clockwise 10-20 times.¹

World Time Function:

This watch features a rotating dial ring that can be used to approximate the current time in major cities around the world. Time is told by visualizing a 24 hour scale circling the perimeter of the watch, as such:

- 1) Convert the current time of the known city to 24 hour time.
- 2) Rotate the crown on the left side of the case until the name of the city is in the corresponding 24 hour position.
- 3) The approximate time for each city on the dial ring will now be shown and is read in 24 hour time.

For example: a person in Hawaii (with a current time of 10:10 pm) wants to know the time in London. The Hawaii label on the dial ring is rotated to the approximate location of where 2200 hours would be. The location of London on the dial ring would then indicate that the current time in London is approximately 0810 hours, or 8:10 am (minutes are shared regardless of Timezone).

Note: account for daylight saving time (+/- one hour) as necessary as daylight saving time is not observed worldwide.

Water Resistance Guidelines		
Rating	Submersible	Capacity of Resistance
No Marking	No	Splash/light contact only.
5ATM	No	Hand/dish washing.
10ATM	Yes	Low depth and short duration only.
20ATM	Yes	Short duration diving up to 5 meters.
25ATM+	Yes	Average depth and duration diving.

¹ Although manual winding is not necessary for continued operation, generating an initial power reserve and occasionally winding the movement manually will increase the operation duration. Manual winding may also be used to start a movement that has stopped running due to the mainspring uncoiling completely.
