

How to set the time on a Heritor Adams automatic watch:

- 1) Pull the crown to its most outward position.
- 2) Set the watch to AM time by rotating the crown counterclockwise till the date indicator changes. *
- 3) Set the current time by rotating the crown counterclockwise. For AM, do not advance the hour hand past the 12 o'clock position - for PM, advance the hour hand past the 12 o'clock position once.
- 4) Push the crown in to the middle position.
- 5) Set the current date by rotating the crown clockwise until the date indicator displays the correct value.
- 6) Return the crown to its most inward position and manually wind the movement by rotating the crown clockwise for 10 – 15 seconds. **

* **Note:** Setting the time to AM / PM accordingly ensures that the date / day of the week indicators changes at midnight, rather than noon. If your watch changes the date / day of the week in the afternoon, pull the crown to its most outward position and advance the time one full rotation (12 hours).
