

## How to Set a Reign Bhutan Automatic Watch

- 1) Pull the crown to its most outward position.
- 2) Set the watch to AM time by rotating the crown counterclockwise till the date indicator changes. \*
- 3) Set the current time by rotating the crown counterclockwise. For AM, do not advance the hour hand past the 12 o'clock position - for PM, advance the hour hand past the 12 o'clock position once.
- 4) Return the crown to its most inward position.
- 5) Manually wind the movement by rotating the crown clockwise for 10 – 15 seconds. \*\*
- 6) Set the current date by using a small pointed tool to press the recessed button above the crown till the correct value is displayed.

\* Setting the time to AM/PM accordingly ensures that the date indicator changes at midnight rather than noon. If the date indicator is changing in the afternoon, pull the crown to its most outward position and advance the hour hand one full rotation (12 hours) and reset the date indicator as necessary.

\*\* Although manual winding is not necessary, generating an initial power reserve and occasionally winding the movement manually will increase the duration in which the movement continues to operate when the watch is not worn.
