

How to Set a Reign Canmore Automatic Watch

- 1) Pull the crown to its most outward position.
- 2) Set the watch to AM time by rotating the crown counterclockwise till the date indicator changes. *
- 3) Set the current time by rotating the crown counterclockwise. For AM, do not advance the hour hand past the 12 o'clock position - for PM, advance the hour hand past the 12 o'clock position once.
- 4) Return the crown to its most inward position and manually wind the movement by rotating the crown clockwise for 10 – 15 seconds. **
- 5) Set the current day of the week by pressing the recessed button below the crown until the day of the week sub dial displays the correct value.
- 6) Set the current date by pressing the button on the left side of the case until the date sub dial displays the correct value.

* Setting the time to AM / PM accordingly ensures that the date / day of the week indicators change at midnight rather than noon. If the date / day of the week indicators change in the afternoon, pull the crown to its most outward position and advance the hour hand one full rotation (12 hours) and reset date indicators as necessary.

** Although manual winding is not necessary, generating an initial power reserve and occasionally winding the movement manually will increase the duration in which the movement continues to operate when the watch is not worn.
