

The Morphic M44 / M52 Series Timepieces

(MPH4401 – MPH4406 / MPH5201 – MPH5205)

Setting Instructions

- 1) Pull the crown out two clicks to its outermost position.
- 2) Rotate the crown clockwise until the date indicator advances one position.
- 3) Set the current time by rotating the crown clockwise.
 - Reference the 24 hour sub dial to ensure AM/PM hours are observed accordingly (0-12=AM/12-24=PM).
- 4) Push the crown in one click to its middle position.
- 5) Set the current date by rotating the crown clockwise until the correct value is displayed.
- 6) Set the secondary Timezone indicator (read in 24 hour format) by rotating the crown counterclockwise.
- 7) Push the crown in to its innermost rest position to commence timekeeping.

Note: Setting the time to AM / PM accordingly ensures that the date indicator changes at midnight rather than noon. If the date indicator is changing in the afternoon advance the hour hand one full rotation (12 hours), then reset the date indicator as necessary.

Water Resistance Guidelines

5 ATM – light contact and short duration resistance only. Not suitable for bathing, swimming, diving, or extended periods of contact. **Note:** manipulation of the crown while the watch is in contact with water will negate the rated water resistance as water penetration may occur.
